Covid-19 Data Analysis

Cassandra Cruz Martínez

Dataset description

The dataset was provided by the Mexican government.

This dataset contains an enormous number of anonymized patient-related information including pre-conditions.

The raw dataset consists of 21 unique features and 1,048,576 unique patients.

-
- **Age:** of the patient.
 - **Classification:** covid test findings. Values 1-3 mean that the patient was diagnosed with covid in different degrees.
 - **Patient type:** type of care the patient received in the unit.
 - **Pneumonia:** whether the patient already have air sacs inflammation or not.
 - **Pregnancy:** whether the patient is pregnant or not.
 - **Diabetes:** whether the patient has diabetes or not.
 - **Copd:** Indicates whether the patient has Chronic obstructive pulmonary disease or not.
 - **Asthma:** whether the patient has asthma or not.
 - **Inmsupr:** whether the patient is immunosuppressed or not.
 - **Hypertension:** whether the patient has hypertension or not.
 - **Cardiovascular:** whether the patient has heart or blood vessels related disease.

Data set population

Age histogram

2021-2022
Covid - 19

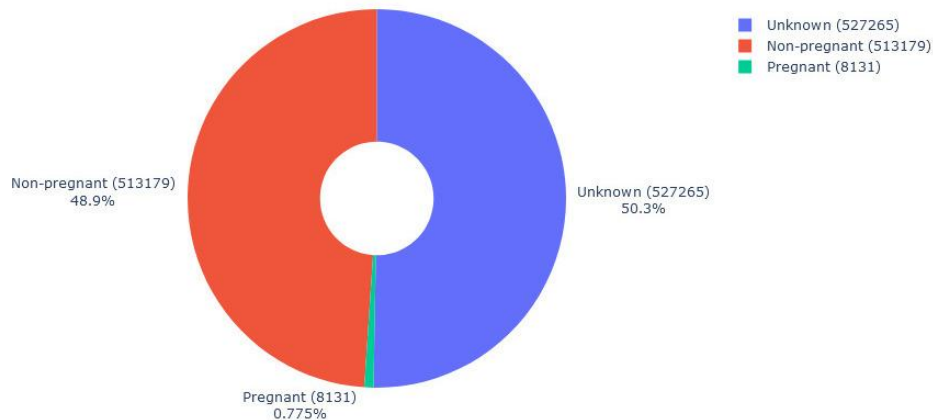

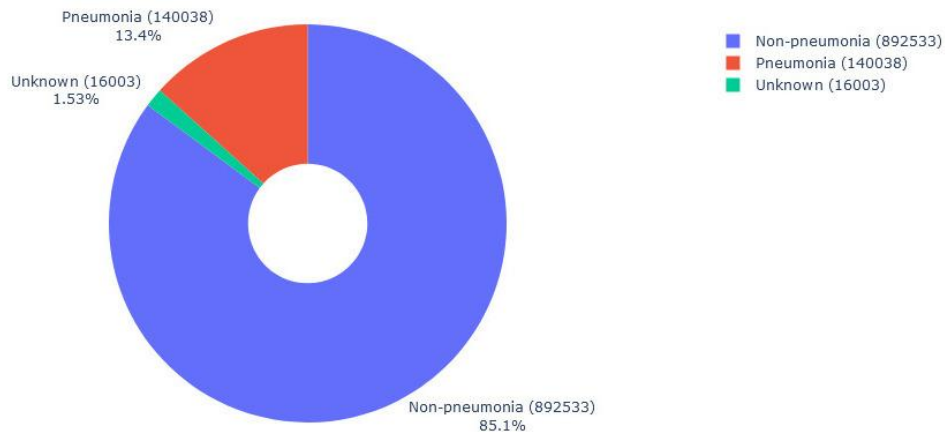

Most common diseases of patients (**Mexican** population)

~1.5M patients

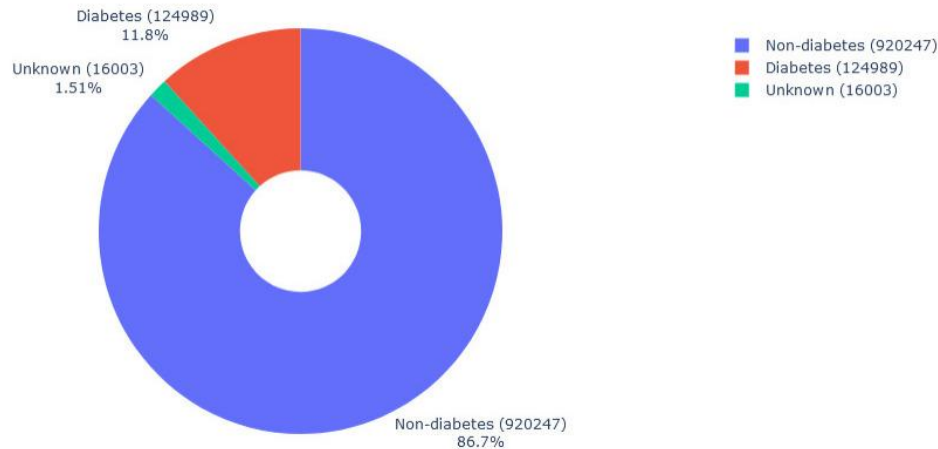

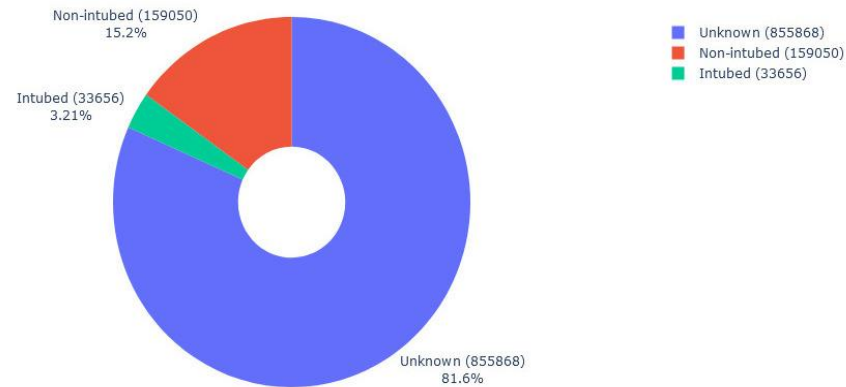

shutterstock.com · 1473385394

Pneumonia

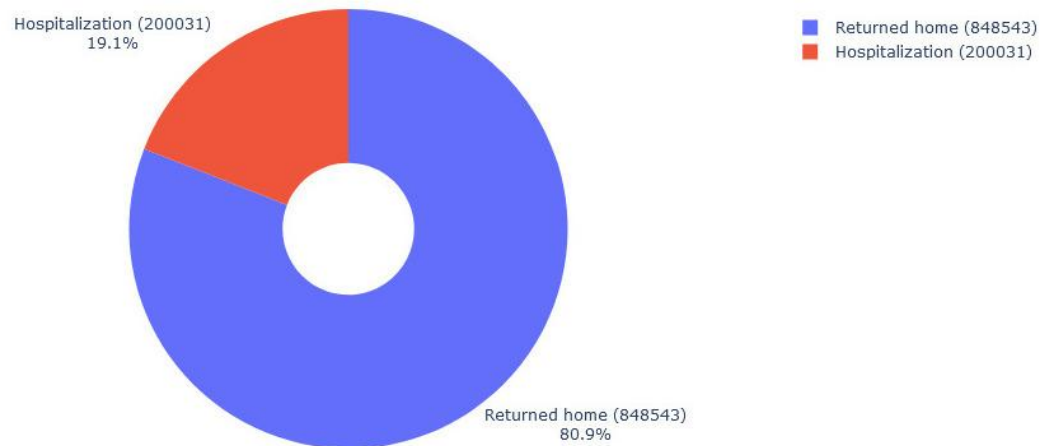

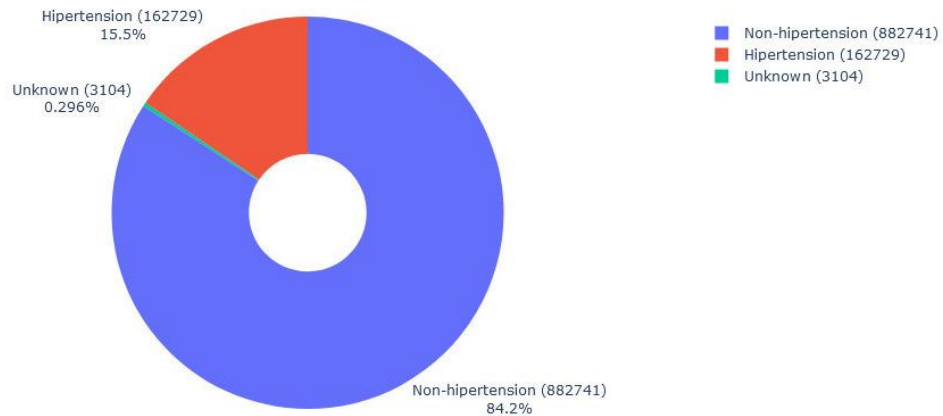

Pregnant women

Intubed

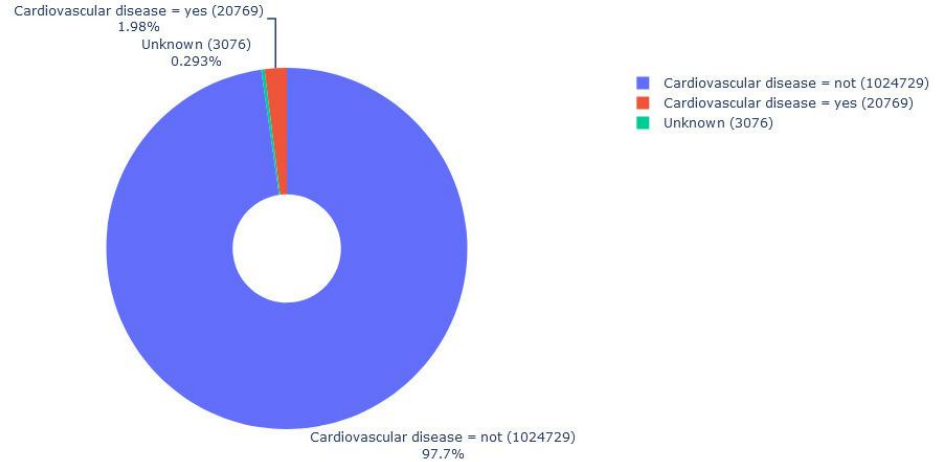

Diabetes

Hipertension

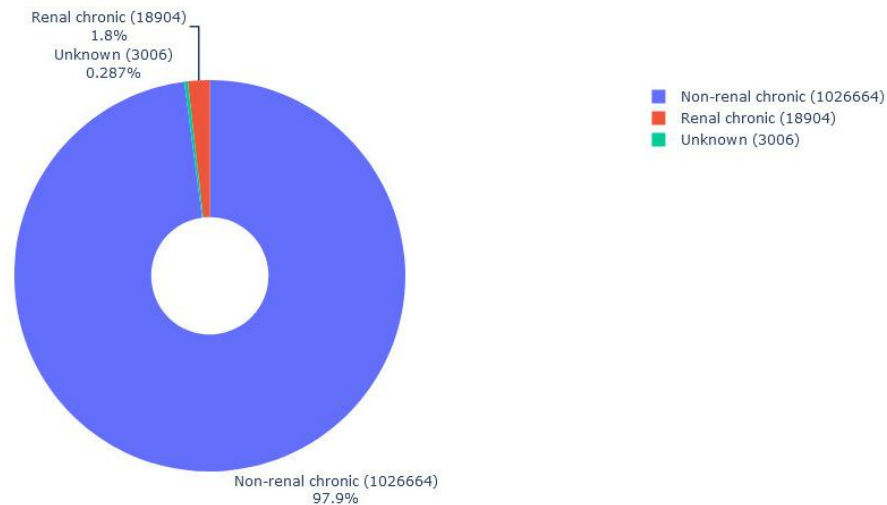

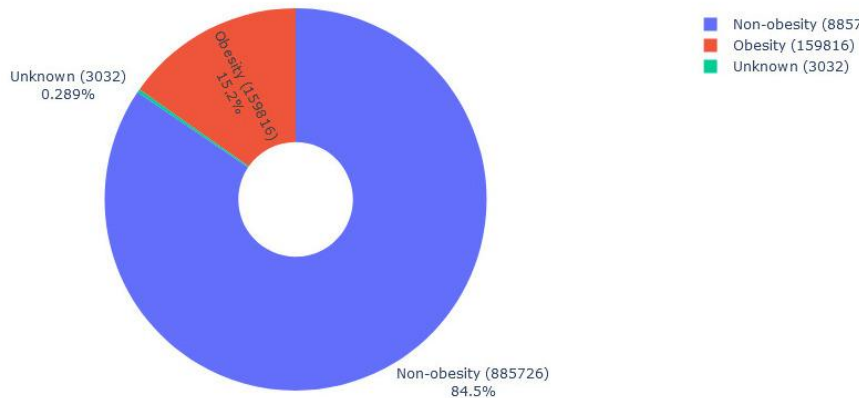

Patient type

The patient has heart or blood vessels related disease

Other disease

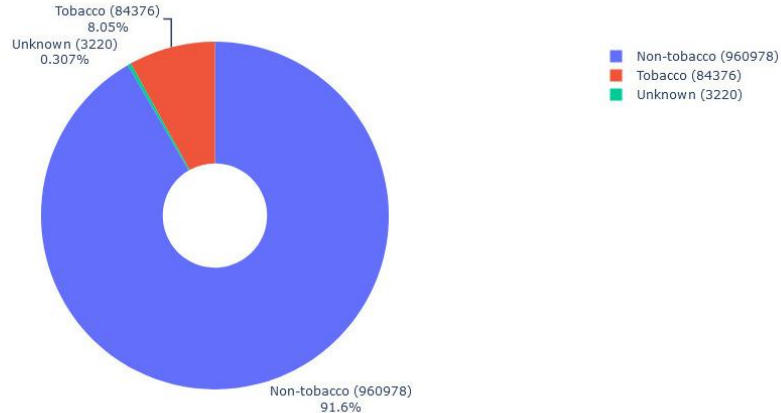

Renal chronic

Obesity

Classification

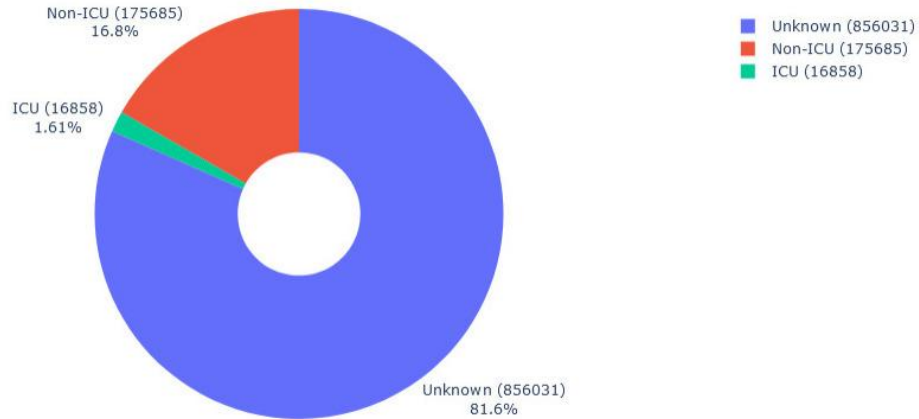

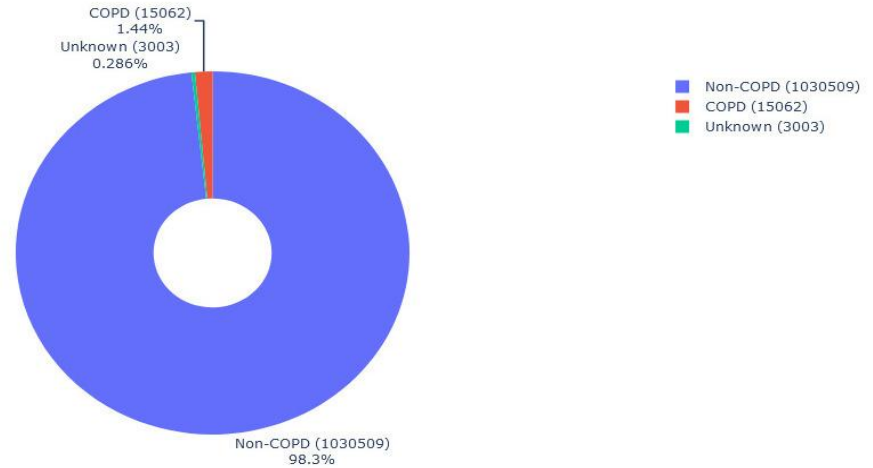

Covid test findings: 1-3 mean the patient was diagnosed with covid in different degrees.
4 or higher means test is inconclusive.

Tobacco

copd

Pulmonary disease or not

ICU

Patient had been admitted to an Intensive Care Unit

inmsup

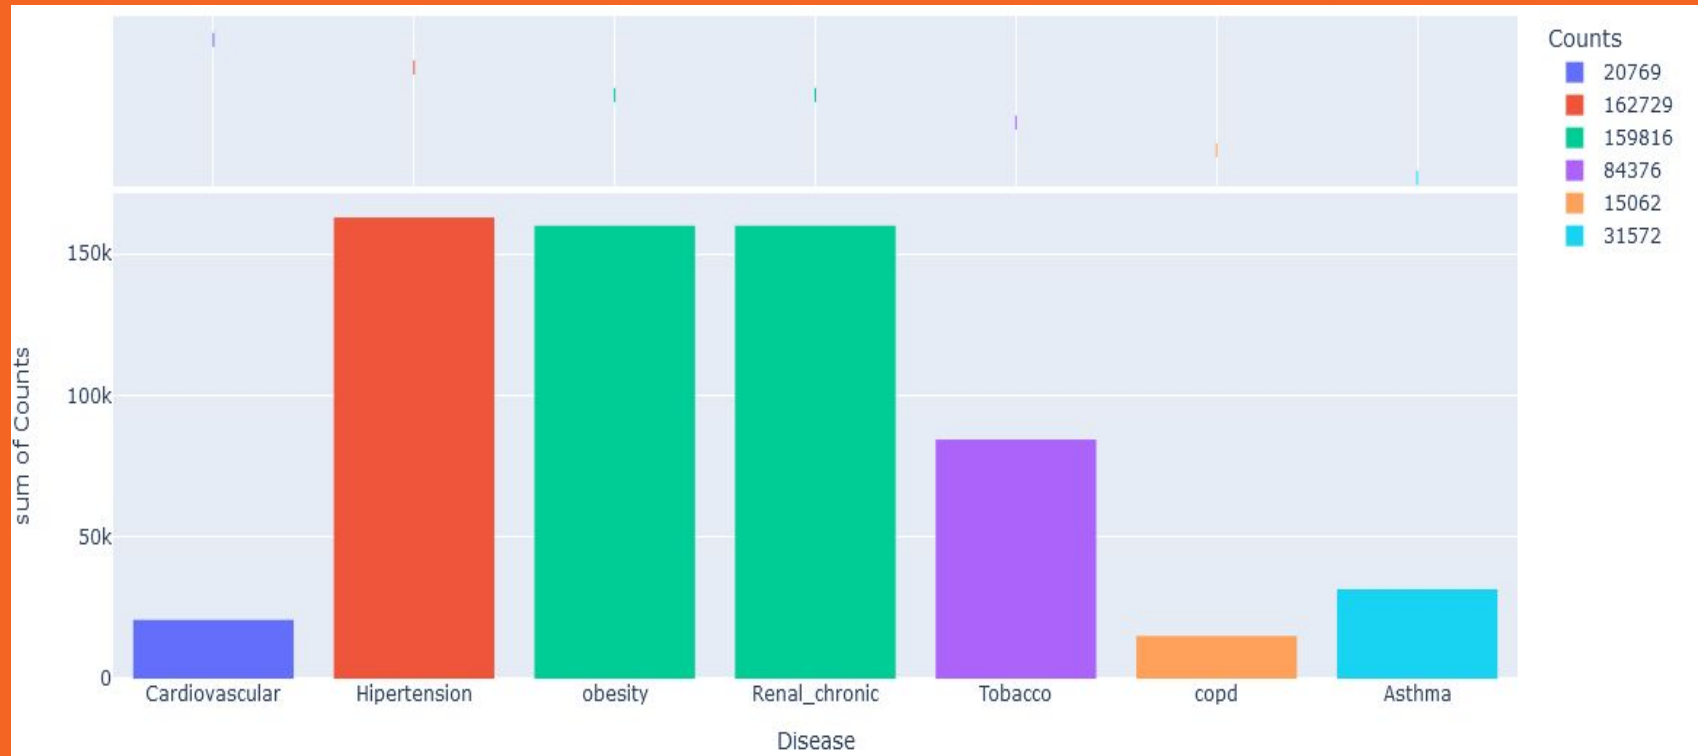

Asthma

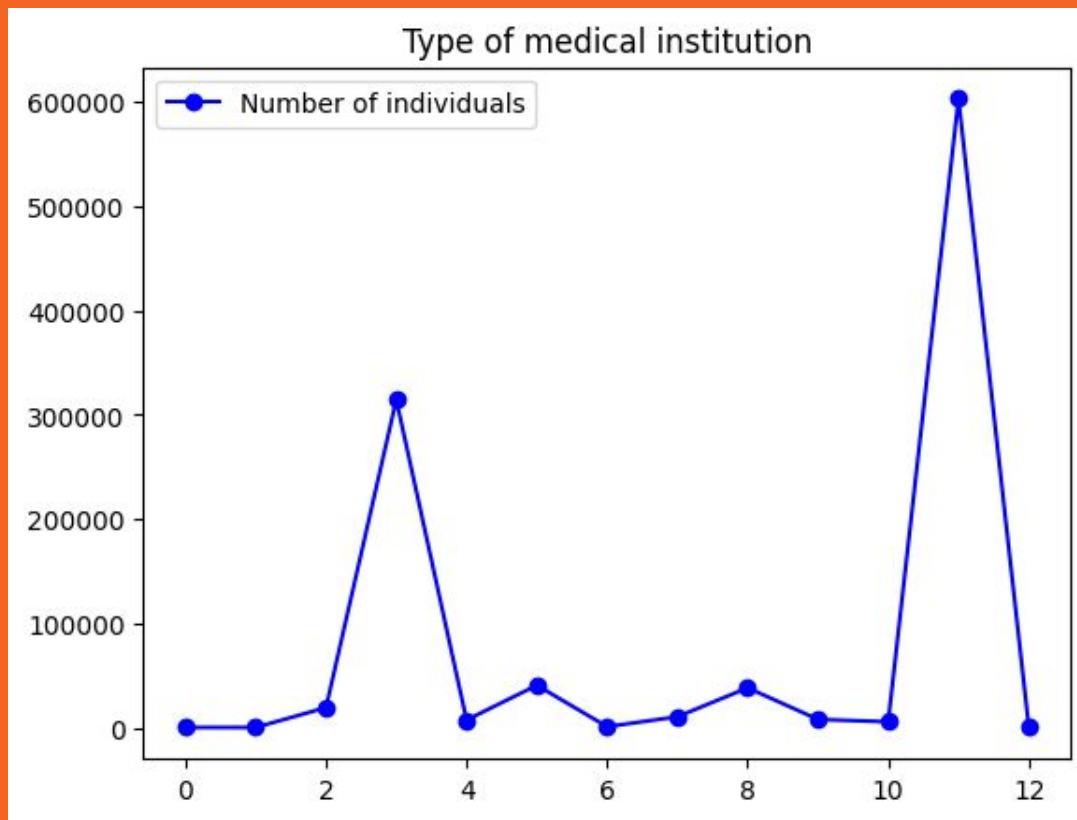

Number of people with a medical condition studied in the dataset

- Condition
- Non-condition
- Unknown

Number of people with a medical condition

Type of institution of the National Health System

Type of hospital:
inconclusive.
It can be: Health
centers, General
Hospital, etc.

Percentage of deaths

In a nutshell

- Pregnant women with diabetes: 64224
- Patients who use tobacco and have pneumonia: 12393
- Patient has kidney damage and obesity: 3734
- Patients with asthma who were intubated: 697
- patients with immunosuppressed system sent home:
7149/hospitalized: 7021
- Number of men and women with hypertension: 81778/80951
- Cardiovascular problems and age: 50-60 years old, on average 400 people in this population.

Interesting data that can be further explored:

1

Main medical conditions related to deaths.

2

How many deaths there are compared to the number of cases?

Covid-19

2

Exploration of the degree of classification of patients, with respect to their age.

-
- Patient physical activity
 - Covid symptoms
 - Vaccines (dose/type)

- Medical equipment in hospitals
- Case study by region
